

## Avoidable Repeat Rate for May 2023 for Newborn Blood Spot Screening - Manchester Laboratory

The avoidable repeat rate for samples received during May 2023 is displayed by Trust in Figure 1. The raw data is provided in Tables 2 and 3. The avoidable repeat rate is calculated by dividing the total number of avoidable repeats by the number of babies tested (i.e. first samples).

**Acceptable: Avoidable repeat rate is  $\leq 2.0\%$**

**Achievable: Avoidable repeat rate is  $\leq 1.0\%$**

A list of trust codes is provided in Table 1.

Tips to help avoid rejection of samples:

- Collect sample on day 5 (date of birth is day 0)
- Check the expiry date on the card
- Wash the baby's heel with water to reduce the risk of a contaminated IRT result
- Ensure that blood spots are the size of the guide circles on the card
- Allow the blood to drop onto the card rather than touching the filter paper to the baby's heel
- Some brands of lancet device are more effective than others
- Extra blood spots, in addition to the 4 indicated by the guide circles, can be collected elsewhere on the card
- Repeat the test at the same visit if the spots are too small or have not soaked through to the back of the card
- Make sure there is a valid NHS number on the card

## Conclusion

The avoidable repeat rate for May was 3.1% which is slightly higher than April (3.0%). The most common reason for rejection of samples was insufficient blood, followed by compressed/damaged. Only three Maternity Units met the acceptable standard, and none met the achievable standard.
