

Division of Laboratory Medicine

Immunology

Immunoglobulin D, IgD

Referred to:

Department of Immunology
PO Box 894
Sheffield
S5 7YT

General information

Measurement of serum IgD can aid in the diagnosis of Hyper IgD Syndrome (HIDS) and IgD myeloma.

Specimen transport: At room temperature

Repeat frequency: At significant change of clinical symptoms

Special precautions: IgD has a relatively short half life.

Samples should arrive in the lab within 24 hours or stored at 4°C if there is a delay in transport.

Laboratory information

Normal reference range: 2-100 KU/L

Volume and sample type: 4ml serum

Method: ELISA

Turnaround time (calendar days from sample receipt to authorised result): Median - 16, 95th percentile - 34

Clinical information

Indications for the test: Familial Mediterranean Fever, underlying immunodeficiency.

Factors affecting the test: None
