

The National Aspergillosis Centre, Wythenshawe Hospital

Aspergillus Antibodies IgG IgE Sampling

Please read this leaflet carefully

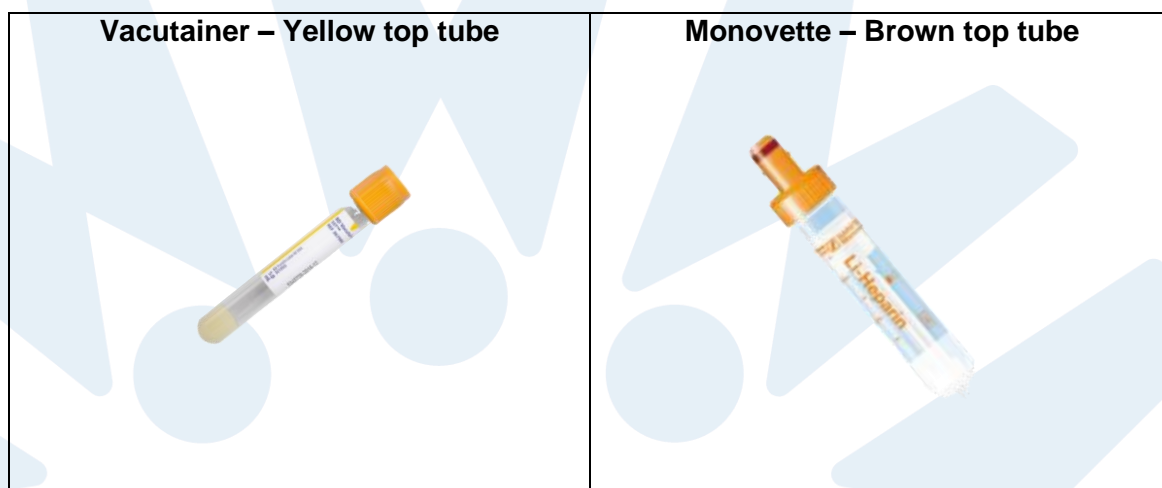

This patient is under the care of the National Aspergillosis Centre for their chronic condition and requires blood level monitoring of their Aspergillus Antibodies IgG IgE.

In order to reduce the amount the patient needs to travel Manchester, we would be grateful if you could facilitate this process.

Instructions:

In order to ensure the sample arrives in our laboratory before Friday, please take the blood sample on a Monday or Tuesday. Please post back via the Post Office using the next day delivery service.

Please see below which blood bottle to use for this test. Choose the relevant bottle for the blood collection system you use.

Use stickers provided or handwrite on the sample and lab form the **patient's name, DOB, NHS number** and **the date and time of collection.**

Place the sample in the provided container, and place in the pre-paid envelope with the completed lab form. Close securely and ask the patient to post as soon as possible.
