

## Information for Parents/Carers

# Advice following probing and Tubing (Stent)

- Do not allow your child to blow their nose.
- Do not let your child rub their eye/s.
- When your child sneezes ask them to place two fingers over the inner corner of their eye. This will help prevent the tubing from becoming dislodged.

### If the tubing becomes dislodged

- Do not allow your child to pull the tubing.
- Tape any of the tubing which has become dislodged to the side of your child's nose or cheek and call the number below. Use any tape you have available or sellotape.

**This is not an emergency and can wait until the morning should it occur at night.**

- If your child's nose bleeds and does not stop call the Paediatric Unit on (0161) 276 5022 available 24 hours every day.
