

Date:

Dear Patient

Name:.....

Dob:

As you are currently pregnant you require a higher dose Vitamin D and Calcium supplementation because of the following risk factors:

- Pigmented skin (including Asian, African and Afro-Caribbean descent)
- BMI \geq 30
- Decreased exposure of skin to sunlight

We suggest you purchase one of the following from your local pharmacy and continue to take it until the end of your pregnancy. If you have any issues with this, please see your GP for a prescription:

- Adcal D3 - 2 tablets, once a day (800 units)
- Calcichew D3 forte - 2 tablets, once a day (800 units)
- Calcios – 2 tablets, once a day (800 units)
- or an equivalent preparation

This additional supplement should be taken **as well** as a general pregnancy multivitamin supplement which contains 400 units or 10mcg vitamin D.

Yours faithfully,

Dear Dr

Name _____ DOB: _____ NHS No: _____

The patient detailed above has recently been risk assessed in pregnancy and requires the following prescribing.
