

# Non Alcoholic Fatty Liver Disease Pathway

(For patients aged 30 yrs – 75 yrs)

\* NAFLD Risk Factors – DM or strong FH DM, NDH, BMI >25, Hyperlipidaemia, Metabolic Syndrome

FIB4 unreliable in pts >75yrs – if pt has neg screen & fatty liver on USS and normal synthetic function then no referral needed. Control modifiable CVD risk factors.

Please use Advice & Guidance service if unsure whether a patient requires further investigations for mildly abnormal LFTs

Inclusion Criteria – ALT >35 & <150, GGT >40 & <200, No symptoms of hepatic disease

Exclusion Criteria - Patient under Hepatology, isolated raised bilirubin or ALP, other significant diagnosis (cancer, connective tissue disease), hazardous drinking levels >35 u p/wk
